

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years building SaaS products at Squarespace, Intercom, and Samsung. Currently leading a site-builder component migration that serves millions of live sites and hundreds of millions of block instances, and a core contributor to an AI-first builder platform (LLM tooling, agent workflows, spec-driven delivery)—promoted from Associate to Senior in three years at Kony. Mentored teams of 7+ engineers and shipped onboarding work that lifted activation by 20%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, HTML, CSS.

Frontend: React, Next.js, Vite, Redux, Ember.js, Tailwind, SCSS.

System Design & Backend: Node.js, Bun, Express, tRPC, REST, Drizzle ORM, PostgreSQL, BullMQ, AWS (EC2, S3), Auth (SSO, OAuth, bearer tokens).

AI & Agents: LLM tool and prompt design, MCP servers, Claude and Gemini via Vertex AI, agentic coding workflows (Claude Code, Cursor).

Delivery: Spec-driven development, stacked PRs, Docker, Drone/Jenkins CI, GKE/Helm, Sentry, OpenTelemetry.

Testing & Quality: Playwright, axe-core, Jest, Cypress, bun:test, mutation-verified tests.

Core Competencies: Web performance (Core Web Vitals), accessibility (WCAG 2.1 AA), SEO, team mentoring.

PROFESSIONAL EXPERIENCE

Senior Software Engineer 2 **SQUARESPACE, Dublin (Ireland)** **Feb 2025 – Present**

- **AI-first site builder (greenfield R&D):** Core contributor to a pre-release website builder where an LLM agent edits the site through typed tools. Worked across a 38-package TypeScript monorepo on Bun (React, Vite, Tailwind v4, Express, tRPC, Drizzle/PostgreSQL, BullMQ). Shipped 92 merged PRs and reviewed 70 more in four months.
- **Spec-driven development:** Wrote 15 architecture and feature specs before any code (requirements, options with trade-offs, acceptance criteria, risks), then delivered each as a chain of small PRs against tracked issues. This became the team's default for anything bigger than a bug fix.
- **Accessibility programme:** Specified and shipped WCAG 2.1 AA compliance for the editor in four phases (focus and ARIA contracts, WAI-ARIA keyboard patterns, screen reader announcements), finishing with an axe-core gate in CI that fails the build on any violation.
- **LLM agent tooling:** Designed typed tool contracts and input validation at the tool boundary for the site-building agent (Claude and Gemini via Vertex AI), plus an MCP server so a separate host app could drive the same tools.
- **AI review pipeline:** Built a multi-persona AI pre-push review gate and a PR review bot wired into GitHub approvals. Adopted stacked PRs and mutation-verified testing as the day-to-day workflow.
- **Text Block migration:** Leading the move of the core rich text component from ProseMirror to Tiptap with feature parity across millions of live sites.
- **Team leadership:** Onboarded two engineering teams (7+ developers) to set up the Website Group in Dublin and established its code review and release practices.

Product Engineer 3 **INTERCOM, Dublin (Ireland)** **Feb 2024 – Jan 2025**

- **Strategic Planning:** Led high-stakes projects, including the Helpdesk (Inbox) revamp and the WhatsApp and Meta integration. Owned the technical and capacity allocation plans, keeping Engineering, Design, and Product Management aligned throughout.
- **Mentorship:** Served as a primary mentor and collaborator, establishing knowledge-sharing sessions to foster team growth and upskill junior engineers.

Product Engineer 2 **INTERCOM, Dublin (Ireland)** **Aug 2022 – Feb 2024**

- **Metric-Driven Growth:** Redesigned the user onboarding experience, lifting user activation by 20%.
- **Business Impact:** Contributed to the addition of **1,000 new logos per month** through optimised onboarding flows.
- **Feature Ownership:** Developed central pillars of the Intercom platform, including Tooltips, AI Chatbot, Tickets, and Workflows, which together led to a 12% increase in paid customers.

Member of Technical Staff	BLUESTACKS, Gurugram (India)	Apr 2021 – Jul 2022
• High-Scale Architecture: Designed and built an authentication and authorisation engine with single sign-on (SSO) support that handles 1 million token exchanges a day. • Bot Development: Led frontend design and development for three large-scale Discord bots (YAGPDB, CARL Bot, and Piggy Bot). Implemented unit and acceptance testing, reaching over 85% code coverage. • Tech Stack: Used React to build responsive interfaces for millions of gamers and community managers.		
Senior Engineer	SAMSUNG R&D INSTITUTE, Bengaluru (India)	Feb 2020 – Apr 2021
• Cost Optimisation: Researched and developed an AI Editor, an interactive tool for creating AI flows (face detection, object detection, emotion generation), which reduced development costs and lines of code by over 80%. • Performance Engineering: Built a JavaScript Offloading Utility to shift high-computation tasks from client devices to local servers, decreasing computation load on client hardware by 50%. • OS Architecture: Worked on the Chromium web engine and Blink rendering engine to keep Tizen OS in sync with upstream Chromium releases.		
Senior Software Development Engineer	KONY INC, Hyderabad (India)	Jun 2019 – Jan 2020
• DevOps Automation: Added SSH-based git clone support for self-hosted Git servers to Jenkins pipelines, using Job DSL and Groovy. • Quality Engineering: Built a code analyser and coverage engine for React, giving the team test coverage on every pull request. • Search Optimisation: Replaced database lookups with Amazon Elasticsearch, cutting API response times by 75% and reducing page load time.		
Software Development Engineer	KONY INC, Hyderabad (India)	Sep 2017 – May 2019
• Frontend Architecture: Owned the high-level design of the Marketplace platform and tuned it to a Google Lighthouse score of 95. • SEO & SSR: Built the Marketplace frontend on Next.js with server-side rendering, improving search rankings and growing the customer base. • Testing Infrastructure: Designed a Java test automation engine that reported website and API health daily.		
Associate Software Engineer	KONY INC, Hyderabad (India)	Aug 2016 – Sep 2017
• UI Development: Built responsive frontend modules for Kony's web portals. • Analytics Integration: Integrated Google Analytics and Tag Manager to track and analyse customer interactions, informing product decisions. • Platform Revamp: Led the design of "Marketplace 1.0", raising the Google PageSpeed Insights score from 69 to 74.		

ADDITIONAL EXPERIENCE & MENTORSHIP

Teaching Assistant	CODING NINJAS, Hyderabad (India)	May 2019 – Aug 2019
• Mentored 300+ students in Data Structures & Algorithms and Competitive Programming. • Conducted code reviews and problem-solving sessions, helping students secure placements at companies such as Amazon and Facebook.		

EDUCATION

B.Tech	Maharishi Markandeshwar University, Ambala (India)	Aug 2013 – May 2017
• Bachelor's degree in Computer Science and Engineering with 8.9 CGPA.
